Response (success)	HTTP 201	POST /register	{ success: true, data: { username, first_name, date } }
Response (error)	HTTP 400 / 409	POST /register	{ success: false, message: "..." }

GenAI Prompt(s)

ให้ทุกหน้าที่มีอะ ถ้าlogin ค้างไว้ก็ให้แสดง ชื่อuser nameที่สมัครไว้ แบบ Hello!.....
ถ้าไม่ได้ login ก็ขึ้นว่า login

Request the name of the user, email for username, and password with at least 8 characters, with at least one special character (like !, @, #, \$, %, ^, &, *) and one uppercase character. Check the password conditions on the frontend. Check for existing username on the backend using auth_user.json. Store new register uses in auth_user.json.
